

Customer Support Guide — SmartHome Hub Account & Service Management

1. Product Overview

The SmartHome Hub allows customers to manage compatible smart-home devices through the SmartHome mobile application.

This document focuses on **account management, household access, service configuration, device ownership, notifications, and customer data requests**. It is intended for situations that are different from hardware, Wi-Fi, and device-pairing troubleshooting.

2. Common Customer Issues

Issue 1: Customer Wants to Add or Remove a Household Member

Possible causes or requests:

- Customer wants another person to access the SmartHome Hub.
- A previous household member should no longer have access.
- The customer wants to change household permissions.

Support steps:

1. Confirm that the customer is signed into the correct SmartHome account.
2. Open the household or account-management section of the SmartHome application.
3. Review the list of currently authorized household members.
4. To add a member, select the option to invite a household member.
5. To remove a member, select the appropriate member and choose the remove-access option.
6. Ask the customer to confirm that the household member's access has been updated.

Escalate when:

- The customer cannot remove an unknown user.
- An unauthorized person appears to have access.
- Account ownership cannot be verified.

Issue 2: Customer Wants to Transfer the SmartHome Hub to Another Person

Common situations:

- Customer sold the SmartHome Hub.
- Customer is moving and leaving the device for the next resident.
- Customer wants another household member to become the account owner.

Support steps:

1. Confirm the customer's identity and account ownership.

2. Explain that the customer should remove personal information and household members before transferring the device.
3. Remove connected devices that should not remain associated with the customer's account.
4. Follow the application's account or device transfer process, if available.
5. Confirm that the new owner can set up the hub with their own account.
6. Document the transfer request in the support case.

Important: Do not provide another person's account information to the customer.

Issue 3: Customer Is Receiving Too Many Notifications

Possible causes:

- Multiple device alerts are enabled.
- Motion, security, or status notifications are configured too frequently.
- Notification preferences were changed accidentally.

Support steps:

1. Open the SmartHome application.
2. Navigate to notification settings.
3. Review the notifications enabled for each connected device.
4. Disable unnecessary alerts.
5. Adjust notification preferences for supported devices.
6. Confirm that the customer receives only the notifications they want.

If notifications cannot be changed or appear to be generated incorrectly, escalate the issue to technical support.

Issue 4: Customer Wants to Change Account Information

Customers may contact support to update information associated with their SmartHome account.

Support steps:

1. Verify the customer's account.
2. Determine which account information needs to be changed.
3. Direct the customer to the appropriate account settings.
4. If the requested change cannot be completed through the application, verify the customer's identity before making or escalating the request.
5. Document the requested change and the resulting action.

Issue 5: Customer Has a Privacy or Security Concern

Examples include:

- An unfamiliar person appears to have access to the household.

- The customer believes their account credentials have been compromised.
- The customer receives unexpected account notifications.
- A customer wants information about how their account or device data is handled.

Support steps:

1. Do not disclose account information until the customer's identity has been verified.
2. Ask the customer to change their account password if unauthorized access is suspected.
3. Review household members and authorized access.
4. Remove unauthorized users when the customer has appropriate account permissions.
5. Document the reported security concern.
6. Escalate the case to the appropriate security or privacy support team.

Security and privacy concerns should not be closed without confirming that the appropriate escalation process has been followed.

3. Frequently Asked Questions

Q: Can another person use my SmartHome Hub?

A: Yes. Customers can invite additional household members through the SmartHome application, subject to the permissions supported by the account.

Q: What happens if I sell my SmartHome Hub?

A: The previous owner should remove personal account information, household members, and connected devices before transferring the hub. The new owner should configure the device using their own account.

Q: Can I control which notifications I receive?

A: Notification preferences can generally be managed through the SmartHome application for supported devices and alert types.

Q: What should I do if I think someone has accessed my account?

A: Change the account password, review authorized household members, remove any unauthorized access where possible, and contact support if the issue cannot be resolved.

Q: Can support provide me with another household member's account information?

A: No. Support representatives must protect customer account information and should not disclose another person's private information.

4. Escalation Guidelines

Escalate the case when:

- There is suspected unauthorized account access.
- The customer reports a potential privacy or security incident.
- Account ownership cannot be verified.
- A customer cannot remove an unauthorized household member.
- Account information cannot be changed through the application.

- A device transfer or ownership issue cannot be completed through the standard process.
- The customer reports unexpected account activity.

When escalating, include:

- Customer name
- Verified account information
- SmartHome Hub model
- Device serial number, when relevant
- Description of the request or concern
- Relevant dates and times
- Actions already performed
- Relevant error messages or notifications

Do not include unnecessary passwords, authentication codes, or other sensitive credentials in the support ticket.

5. Account and Service Requests

Before processing an account-related request, the support representative should:

1. Verify the customer's identity.
2. Confirm the account associated with the SmartHome Hub.
3. Determine exactly what change or service the customer is requesting.
4. Follow the applicable account-management procedure.
5. Document the action taken.
6. Escalate the request if it involves security, privacy, or account ownership concerns.

6. Customer Communication Guidelines

Support representatives should:

- Remain polite and professional.
- Clearly explain account-management procedures.
- Avoid requesting passwords or authentication codes.
- Protect customer privacy.
- Explain security-related steps carefully.
- Avoid confirming sensitive information about another person.
- Confirm the customer's requested change before completing the case.
- Document important details in the support ticket.

Example Support Response

"Thank you for contacting SmartHome Support. I can help you review the people who currently have access to your SmartHome Hub. Please open the SmartHome application and go to your household or account-management settings. From there, you can review the authorized household members and remove access where appropriate. If you see someone you do not recognize or cannot remove an unfamiliar user, please let us know so

we can escalate the security concern."
